PROFESSIONAL SUMMARY

Full Stack Developer with 3 years 3 months of experience building web applications with Angular, .NET Core and SQL Server. Currently working on Health4Community, a multi-tenant SaaS platform covering HR, policy & procedure, and billing management. Experienced in automation, real-time communication, third-party integrations and reusable, config-driven UI architecture. Uses AI-assisted development (Claude Code) in daily work to deliver features faster while keeping code quality high.

TECHNICAL SKILLS

Frontend Technologies: Angular (up to v19, Standalone Components, Signals), Kendo UI for Angular, JavaScript, TypeScript, RxJS, HTML5, CSS3/SCSS, Bootstrap

Backend Technologies: .NET Core, C#, Web APIs, SignalR, Modular Monolith Architecture

Database: SQL Server, Entity Framework Core (Migrations, Multi-tenant)

Cloud & DevOps: Azure Email Service, Azure DevOps (Repos, Boards, Pipelines), Git

AI-Assisted Development: Claude Code (AI coding assistant) for feature development, code review, refactoring and SonarQube issue fixing

Code Quality: ESLint, SonarQube

Automation: Hangfire, Background Services

Integration & APIs: Calendly, Google Gemini API, RESTful APIs

Tools & Others: PDF Generation, Excel Import/Export, Caching, Real-time Notifications

PROFESSIONAL EXPERIENCE

Software Developer

iFour Technlab Pvt. Ltd.

2023 - Present (3 Years 3 Months)

Health4Community (H4C) Project

Multi-tenant SaaS platform for healthcare organisations, built with Angular 19 + Kendo UI and a modular .NET Core backend. Worked across its three core modules:

- **HRM (Human Resource Management):** Built attendance tracking with a kiosk check-in app and device logging, shift roster and coverage planning, leave management, timesheets, and user/role management with permission-based access
- **PMS (Policy & Procedure Management):** Developed document and file library, policies and procedures with preview/edit flows, folder explorer, tagging, document import and sign-off tracking

- **BMS (Billing Management System):** Implemented contractor management, billing data imports, billing settings, and billing reports with restore periods
- **Reusable Architecture:** Built config-driven common components (data grid, dynamic forms, dialogs, context menus, file upload) shared across all modules, reducing new-screen development time
- **Platform Features:** Real-time notifications, email templates with merge-field placeholders, unsaved-changes protection, and centralised API error handling
- **AI-Assisted Development:** Used Claude Code daily for implementing features, reviewing code, writing tests and resolving SonarQube findings, improving delivery speed and code quality

PIQET Project

- **Report Builder:** Built a dynamic report builder that lets users create custom reports by choosing data fields, filters, grouping and sorting, then preview, save and export them
- **PDF Report Generation:** Developed comprehensive PDF reporting system with professional UI design and email sharing capabilities
- **Email Automation System:** Implemented automated email campaigns triggered by user actions (signup, purchase, trial requests). Built multi-step automation workflows with configurable delays and integrated Hangfire for reliable background job processing
- **Azure Email Integration:** Configured Azure Email Service to track email events (opens, clicks, delivery status) and developed analytics dashboard for automation performance monitoring
- **Session Management Optimization:** Replaced inefficient API polling (every 15 seconds) with SignalR real-time communication, built background service for session monitoring with proactive user notifications
- **Real-time Features:** Developed news broadcasting system for all logged-in users using SignalR and implemented instant notifications system
- **Data Import Solutions:** Built Excel import functionality with predefined templates and custom template system allowing personalized import mappings with data validation
- **Performance Optimization:** Implemented caching mechanisms for external API calls to improve response times

FEEDBACK Project

- **Marketing Automation:** Developed automated messaging system for business growth and worldwide marketing campaigns
- **AI Integration:** Integrated Google Gemini API for intelligent content generation, automated creation of HTML templates, survey forms, and marketing content within Froala editor
- **Business Tools Development:** Created dynamic survey and signup form generators, implemented QR code generation for marketing campaigns, and developed responsive marketing page templates

KEY ACHIEVEMENTS

> **System Optimization:** Reduced server load by 90% by replacing polling mechanism with SignalR real-time communication

> **Automation Efficiency:** Streamlined email marketing workflows, reducing manual intervention by 80%

> **User Experience:** Enhanced session management with proactive notifications, improving user retention

> **AI Integration:** Successfully implemented Google Gemini API for automated content generation, reducing content creation time by 70%

CORE COMPETENCIES

Full Stack Web Development • Multi-tenant SaaS Development • AI-Assisted Development (Claude Code) • Real-time Application Development • Email Marketing Automation • Third-party API Integration • Database Design and Optimization • Background Job Processing • AI/ML Integration • Performance Optimization • User Experience Design

EDUCATION & TRAINING

Training Period: 6 months (2023)
Professional Experience: 3 years 3 months at iFour Technolab Pvt. Ltd.
